## Energia Proveniente do Esgoto

Wastewater contains thermal energy, and we can recover some of this energy with heat pumps.

With our [HUBER ThermWin system](#) for heat recovery from sewage we withdraw sewage from the sewer, screen it, pump it through above-ground Heat Exchangers, and then return it back into the sewer.

Because we screen and pump the sewage, we can use [compact and cost-effective heat exchangers](#), wherein we generate a well-defined and turbulent flow for efficient heat transfer.

For screening we use a vertical screw screen [HUBER Pumping Stations Screen ROTAMAT® RoK4](#) that is compact and lifts the screenings through its vertical auger. Returned sewage flushed the lifted screenings over a chute back into the sewer.

## Produtos

- [Trocador de Calor HUBER RoWin](#)
- [HUBER Peneira para Estações Elevatórias ROTAMAT® RoK4](#)

## Benefícios

- Efficient use of renewable and sustainable energy
- Unlimited availability, secure supply
- Local and free, decentralized heat source
- Cost-effective from a dry weather flow of around 10 L/s
- Negligible effect on wastewater treatment (sewage cooling by 1 – 2 °C only)
- Independence from sewer size

- Use of compact, efficient and cost-effective heat exchangers
- Heat exchangers above ground (easy access for installation and maintenance)
- Little construction work (narrow manhole beside sewer)
- Minimal interference of existing sewers (only drilling of two holes)

## Relatórios práticos
